RESEARCH INTERESTS

At the heart of my research interests is the belief that philosophical questions can be investigated empirically. I draw on psychological theory, statistical modeling, experimental methods, and qualitative analysis. In particular, I hope to contribute to understanding how the mind shapes and is shaped by concepts such as moral judgment, character, values, scientific reasoning, meaning-making, and language. I believe that by understanding how we engage with the profound questions of the everyday human experience, we can cultivate flourishing in ourselves, one another, and our communities.
